

V2X Continues its Commitment to Tolling in the State of Florida

V2X (formerly Raytheon) has designed, developed, installed and maintained traditional and Open-Road Tolling solutions for the Florida Turnpike Enterprise since 2006. With hardware installed at the Turnpike, HEFT, Sawgrass, 429 Western Beltway, 417 Eastern Beltway, Orchard Pond and SunTrax. With 102 unique plaza IDs, 290 tolled lanes; 369 lanes total. The equipment has far exceeded the required design lifespan and continues to perform above target accuracy KPIs, providing better than expected total cost of ownership.

With significant presence and a home base in Orlando. Steve Charles and Ray Maikkula continue the long tradition of V2X supporting tolling in the State of Florida. In discussing his long tenure and support to FTE Ray, seen on the right below says, “As a Team Florida Ambassador I try to never miss a meeting because engaging with stakeholders all across the State is what drives my enthusiasm to deliver the highest performing solutions.” Steve, below on the left, says “I have been visiting, living or working in Florida since 1974 and have most of my family there. I have seen the State grow so much since then and I want to play my part in facilitating efficient travel and commerce”.
